Preparation responses relative to each single herb

Complete five-pair intersection from all 420 preparation–program pairs

All displayed conditions: 70% ethanol, high ordinal exposure level

	Original class-adjusted q	
	vs peony	vs licorice
2:1 co-extract† Androgen	0.0238	0.0315
2:1 co-extract† EGFR	0.00495	0.0354
1:1 separate mixture MAPK	0.00418	3.67e-05
1:1 separate mixture PI3K	0.0121	0.0114
1:2 separate mixture MAPK	0.000149	3.78e-07

Shared mixture libraries; comparator-specific original adjustment families.

† Both co-extract pairs lose the intersection after GSM9013891 omission.
The other three pairs remain; that omission is outside their comparison groups.
